IPBES Assessment of the Diverse Values and Valuation of Nature

The SPM 10 key messages 4 sections:

A. Understanding the diverse values of nature

B. Measuring and making visible the values of nature

C. Leveraging the diverse values of nature for transformative change towards sustainability

D. Embedding the values of nature for transformative decision-making for sustainability

Key message 2

Despite the diversity of nature's values, most policymaking approaches have prioritized a narrow set of values at the expense of both nature and society, as well as of future generations, and have often ignored values associated with Indigenous Peoples' and local communities' worldviews

Key message 8

Transformative change needed to address the global biodiversity crisis relies on shifting away from predominant values that currently over-emphasize short term and individual material gains, to nurturing sustainability-aligned values across society
